

# Xamarin.Forms Pages

## Pages

The [Page](#) class is a visual element that occupies most or all of the screen and contains a single child. A `Xamarin.Forms.Page` represents an Activity in Android, a View Controller in iOS, or a Page in Windows Phone.

Xamarin.Forms supports:

Type	Description	Screenshot		
<a href="#">ContentPage</a>	A <a href="#">ContentPage</a> displays a single <a href="#">View</a> , often a container such as a <a href="#">StackLayout</a> or a <a href="#">ScrollView</a> .			
<a href="#">MasterDetailPage</a>	A <a href="#">Page</a> that manages two panes of information.			
<a href="#">NavigationPage</a>	A <a href="#">Page</a> that manages the navigation and user-experience of a stack of other pages.			

Type	Description	Screenshot		
				
<a href="#">TabbedPage</a>	A <a href="#">Page</a> that allows navigation between children pages, using tabs.			
<a href="#">CarouselPage</a>	A <a href="#">Page</a> allowing swipe gestures between subpages, like a gallery.
